

**AMENDMENTS - IN THE SPECIFICATION**

1. Replace the third paragraph on Page 8 with the following paragraph.

The parent device driver 205 and the child device drivers 210 provide respective generic ~~parent~~parent and child diagnostic interfaces to a diagnostic user system 215. The parent device driver provides an interface for controlling all the child devices simultaneously. Each child device driver provides an interface for monitor/control of at least one specific respective sensor device. Each one of the child device drivers drives a respective sensor device and, in some cases, a respective system component. The child device driver interfaces each enable monitoring and/or control of sensor data from a respective sensor device of a computing system (e.g., server). Examples of such sensor devices include fan speed sensors, die temperature sensors, die voltage sensors and the like.
